

# Guide Dog

Anne Elisabeth Reichert, Felix Schiel, Leonard Klüpfel, Maximilian Durner

# Guide Dog is a rmc hosted vision pipeline, securely accessible from within and outside the rmc network solving two use cases

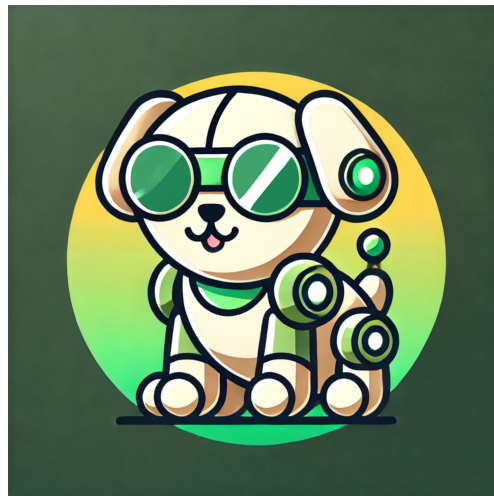

## Robot use case

- **User: “We have a camera on our robotic system but no object pose estimation”**
- **User sends image to obtain full 6D pose for all visible objects**
- **Registration for user requests from outside the rmc-network and authentication (when requesting)**

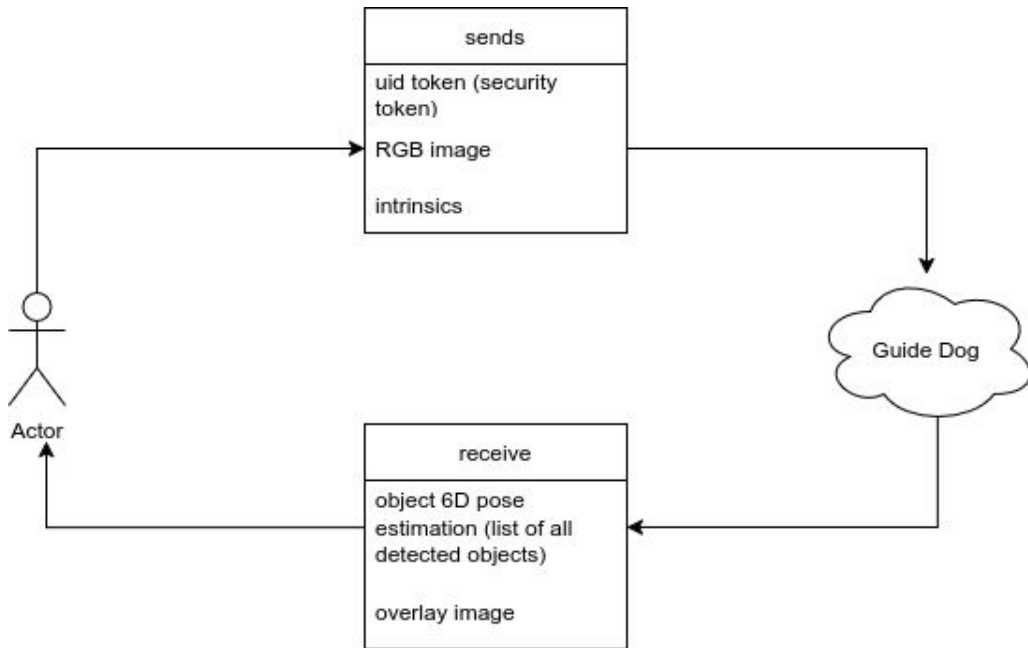

## Prototyping use case

- **User: “I have a camera and just need quickly the 6D pose of this object for some tests”**
- **Potentially requested from within the rmc-network**

Guide Dog to the rescue!

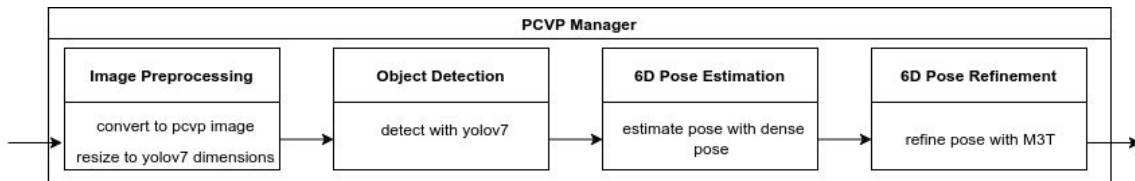

## Overview

## Comment

- **User sends API request** to obtain 6D pose of all objects in image
- **Guide Dog answer request** with all detected object poses (if user authentication was successful)

## Overview

## Comment

- **Standard PCVP manager service** for 6D pose estimation
- **Start with one manager config**, e.g., YCBV objects
