

Guiding Robotic Vision. Enabling Collaboration.

Web-Based Robotic Perception.

Guide Dog provides fast and intuitive access to our latest perception pipelines — directly through a web interface or via API integration. Upload your data, configure the method, and evaluate results within minutes. No complex setup. No maintenance overhead. Just immediate access to state-of-the-art robotic vision.

Latest Methods — Without the Integration Effort

Guide Dog offers a streamlined web and API interface to test modern perception approaches within your browser or directly inside your own project environment.

Our goal is to provide rapid access to advanced localization and detection methods — without requiring you to build, deploy, or maintain a complete perception stack.

Test. Benchmark. Advance.

- Analyse new methods directly on your robotic system
- Test performance using your own data and scenarios
- Evaluate our methods alongside your existing solutions
- Reduce development time and infrastructure effort
- Identify and overcome vision-related bottlenecks

Value for Research

Collaboration through Guide Dog allows us to continuously improve and validate our pipelines in real-world environments.

Through joint testing, we gain:

- Practical feedback from industrial and research applications
- Performance insights across different robotic platforms
- Benchmark data from diverse real-world scenarios
- Valuable experience to refine and optimize our methods

How It Works

- Get secure access to the platform
- Upload your image and parameters
- Configure the desired pipeline
- Receive your output

Let's Collaborate
